ANSWER 1 OF 3 USPATFULL on STN L4

TT Composition for nasal absorption

This invention attempts to provide a composition for intranasal AR administration which has markedly lower risk of developing side effects

compared to oral formulation, which promptly exhibits analgesic effects,

and which has excellent bioavailability. The composition for

nasal absorption comprises a carrier of

calcium carbonate and/or calcium

phosphate having an average particle size of 500 µm or less

and an effective dose of an opioid analgesic uniformly

distributed and attached to the carrier.

ANSWER 2 OF 3 CAPLUS COPYRIGHT 2007 ACS on STN L4

Compositions for nasal absorption of analgesics TI

It is intended to provide a composition for nasal administration AB which shows an extremely low expression ratio of side effects, quickly exerts an analgesic effect and has an excellent bioavailability, compared with prepns. for oral administration. Disclosed is a composition for nasal absorption wherein an opioid analgesic in an ED is uniformly dispersed in a carrier comprising calcium carbonate and/or calcium phosphate and having an average grain size of 500  $\mu m$  or less and adhered/bonded thereto. For example, morphine hydrochloride 2, CaCO3 (average diameter 62 μm) 37.2, and starch 0.4 mg were blended and kneaded with water. product was freeze-dried at -40°, warmed up to 25°, and mixed with Ca stearate 0.4 mg to give a preparation for nasal administration.

ANSWER 3 OF 3 USPATFULL on STN L4

Use of blood and plasma donor samples and data in the drug discovery ΤI process

Systems consistent with the present invention provide a method for AΒ identifying and recruiting donors whose demographic characteristics, genomic and proteomic profile, and medical histories make them attractive candidates for clinical trials, drug target identification, and pharmacogenomic studies.
